#### **BACKGROUND INFORMATION**

The Site is a former metal salvage and recycling facility. As part of the salvage process, operators at the Site obtained electrical transformers and other components from companies such as LPL. Site operators

drained oil containing polychlorinated biphenyls (PCBs) from the transformers, dismantled the transformers and used a high-temperature oven to burn residual oils, paper and varnish from the copper and aluminum transformer cores. PCBs are a listed hazardous substance pursuant to section 102(a) of CERCLA, 42 U.S.C. § 9602, and 40 C.F.R. § 302.4.

Historical sampling has indicated PCB contamination in on-site and off-site soils. The EPA conducted a removal action on the Site beginning on November 5, 2018, removing and disposing of PCB-contaminated soils and building elements.
